

Fabric Tension
System (FTS)

Fabric Tension System (FTS) provides solutions for shading large areas, either horizontally or on a gradient. The FTS is an ideal solution for curved, horizontal or sloped glass panels and even vertical ones where the fabric needs to be constantly under tension. Applications include greenhouses, skylights, domes as well as beer gardens and terraces in restaurants, hotels and shopping centers

The sophisticated concept is applicable to exterior or interior shading. Thanks to FTS, the fabric flatly distribute alongside the glass or system framework that is much more uniquely and fantastic ever than other systems available in the market.
